

## **Notice of Work**

Waterbody: Lake Fairlee Towns: Fairlee, West Fairlee, Thetford

Lake Association: Lake Fairlee Association

Project Type: DASH

Permit # 3123-ANC-H (2020)

Contact: Sean Brown (LFA) sean@bennsarrow.com

Date: August 8, 2023

The Lake Fairlee Association has contracted with Swampguana Diving LLC, to perform DASH Eurasian Milfoil (EWM) mitigation work for 2023. Areas of focus for DASH removal are attached to this notice and were identified based on previous survey data, reports from lake residents and users, and visual confirmation during informal survey. In proposed control areas where the attached survey showed little or no EWM, concentrations appeared to be sparse to moderate. Concentrations in the Middlebrook estuary were the highest observed.

Work is intended to begin on or around August 14, 2023 and conclude by September 30, 2023. For 2023, we did not proceed with a ProcellaCOR treatment due to low-levels of detected EWM during the Spring survey. However, the recommendation from our lake management contractor, Solitude Lake Management, was to proceed with DASH.

## Attachments:

- Proposed DASH Control Areas: 19.3 acres (see map)
- 2022 Treatment Areas and Littoral Zone: 158 acres (see map)
- EWM Concentration (9/7/2022)

Sincerely,

Sean Brown
